Processing the data of comparative measurements by
the method of triple control enables us to determine
the magnitude of the error of measurement by the dif-
ferent types of radiosonde. Systematic errors in the
determination of the heights of the isobaric surfaces
by means of the U. S. S. R. radiosonde type R3-049
(P3-049) may be almost completely eliminated and ran-
dom errors lessened by making corrections for radia-

The observations refer to the period from May 5 to 12,

of the vertical velocities of air movements and the in-
crease, with height, of the wind velocity.
